

Technology for a church

Situation and solution

You want to go online with your community and you don't have the financial means or the appropriate personnel.

In the following we show you a solution.

The community becomes a member (if you can't afford the 100 Euro monthly fee just apply for a discount). You need a good internet and a monitor for a computer as well as keyboard and mouse (USB or wireless).

Needed technology on loan for your community

Fomako PTZ camera with 20x zoom
Prepared for direct streaming
to our platform.

Mini PC to control the camera from outside.
Monitor, keyboard and mouse are
provided by the church.

In addition, a connection cable from the sound system to the camera, two network cables and a router are required.

How to go live

For the first live stream, one of our employees comes and sets up the technology on site. During this process, employees of the municipality will also be trained as far as necessary.

If you have a Youtube channel, we can set it up directly. Then your service will be broadcasted on God24.TV or Jesus24.TV as well as on Youtube.

Apart from the membership fee there are no further costs.
